Basic engineering

Fire Protection basic engineering

- » **Protection needs** of the establishment according to Spanish regulation (RD 2267/2004, CTE-DB SI) and well recognized standards (NFPA, FM, other insurance standards).
- » **Improvement plans** for fire safety prioritized according to criticality and investment cost.
- » **Cost estimation** in each phase.

Project Review

- » **Analysis of Fire Safety projects** and associated documentation provided by the client/contractor.
- » **Reports of deviations** regarding local regulations and recognised international standards (FM, NFPA, other insurance standards) with the corresponding recommendations (actions / steps to correct these deficiencies).
- » In later stages we can also provide assessment to the customer in negotiations with fire system contractors and facilities commissioning.

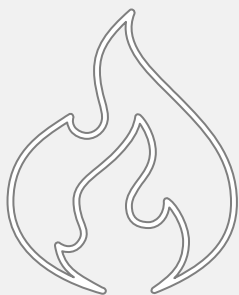

Due diligence on safety conditions

Investments in fire safety to comply with local regulations or international standards must be taken into consideration in a due diligence process. This service consists of the following stages:

- » Development of safety parameters to be assessed in the establishment, from mere regulatory compliance to a standard defined at the corporate level, which is carried out with the company's technical managers.
- » Definition of safety values considered acceptable to the company as a minimum.
- » Identification of improvement measures and economic valuation for its implementation.
- » Preparation of final report with quantification of the result of the analysis

Fire Safety systems review

During the review, following items are considered:

- » Documentation related to facilities, both memory / project (if any) and maintenance
- » Implementation and suitability of installed fire safety systems
- » Maintenance performed on existing systems
- » Checks on specific systems (upon request)

Specialized Training

We provide customized training in fire safety systems through certified experts:

- » **Fire risk awareness** sessions customized to the industrial activity of the client.
- » Seminars on **legislative developments in Fire Safety**
- » **Advanced training on system design:** Fire Detection and
- » Alarm, Fire Water Supply, Sprinklers, Water Mist Systems, Foam Systems, etc.
- » Training for **maintenance operations** in fire systems
